PROFESSIONAL SUMMARY

- Student researcher with 4+ years of experience in data science, machine learning, and full-stack development
- Skilled in Python-based data analysis, computational modeling, and quantitative problem-solving
- Strong interest in applying computational and ML methods to clinical and biomedical challenges

EDUCATION

Johns Hopkins University – Baltimore, MD

Bachelor of Science in Chemical & Biomolecular Engineering and Computer Science | Class of 2029

GPA: 3.75 | ACT: 36

EXPERIENCE

Dash Bio, Weston, MA – Software Engineering Intern (Jun 2026 – Present)

- Designed and owned end-to-end an automated quality assurance pipeline, collaborating with the QA, software engineering, and product teams to replace manual review before deployment
- Reduced a 25 hour manual KPI reporting process to near-instant through automation, improving turnaround and freeing engineering time for higher-value work

Harvard Medical School, Blavatnik Institute, Cambridge, MA – Research Assistant (Feb 2024 – Present)

- Researched preclinical passive detection technology with Dr. Kee Park, the Global Neurosurgery Team Head
- Co-authored an article published by the American Association of Neurological Surgeons (Nov 2024)
- Developed binary classification ML models on audio and image datasets (~2,500 samples) to identify neuromotor and speech-related biomarkers

SportMind, Weston, MA – Cofounder (Apr 2022 - Present)

- Developed a web and mobile platform to promote awareness of mental health challenges in sports and provide tools to build mental resilience
- Reached 100,000+ athletes through partnerships with the World Squash Federation and affiliated clubs
- Supporting over 6 athletes competing in the 2028 LA Olympics and 3 top 10 world-ranked squash players

PROJECTS

GreenChain, HackPrinceton Spring 2026 – 3x Track Winner (Jun 2026 – Present)

- Built a multi-agent AI platform that autonomously researches manufacturers and supply routes and evaluates environmental sustainability for SMB supply chains
- Deployed agents across virtual machines for parallel web crawling and analysis, using XGBoost to score supply-chain sustainability
- Integrated web data collection, ML inference, and automated recommendations in an end-to-end application

TECHNICAL SKILLS

- Programming: Python (Pandas, NumPy, Scikit-Learn, PyTorch), Dart (Flutter), JavaScript
- Machine Learning: Binary classification, model training, feature engineering, RAG systems
- Developer Tools: Git/GitHub, REST APIs, Firebase, SQL, Pinecone, Docker

ACTIVITIES & COMMUNITY SERVICE

- Assistant Squash Coach — Johns Hopkins University Club Squash Team
- Volunteer Squash Coach — coached children ages 6–12, teaching fundamentals and teamwork
- Volunteer, Weston Council on Aging — provided tech support for over 100 senior citizens
